Senior Technical Program Manager | Cloud Infrastructure | Distributed Systems

Senior Technical Program Manager with 17+ years of experience leading large scale technical programs across communications systems, network operations, cloud infrastructure, and enterprise transformation within Amazon Web Services and the United States Marine Corps. Specialized in communications architecture, network operations, systems integration, technical planning, forecasting, risk management, and enterprise scale infrastructure modernization supporting mission critical environments. Directed cross functional engineering efforts involving cost, schedule, technical performance, stakeholder coordination, issue resolution, and delivery of complex technology solutions across highly matrixed organizations. Skilled at translating operational requirements into technical capabilities, developing long range roadmaps, and aligning organizational objectives with technology investments and execution strategies.

TECHNICAL PROFICIENCY

Software Development & Program Delivery: Jira, Microsoft Project Server & Desktop, Agile, Scrum, Kanban, Waterfall, Technical Roadmaps, Risk & Dependency Tracking, Work Breakdown Structures (WBS)
Cloud & Distributed Systems: Amazon Web Services (AWS), EC2 Networking, Elastic Load Balancing (ALB/NLB), VPC, API Gateway, AWS CloudWatch, Kinesis, Distributed Systems, Cloud Infrastructure
AI & Automation Platforms: Amazon Bedrock, Claude (Anthropic), GPT/ChatGPT
Data & Analytics Platforms: QuickSight, SQL/Athena, Advanced Excel, VBA Automation, KPI Reporting, Forecasting & Operational Analytics
Enterprise Collaboration & Technical Documentation: Microsoft Office Suite, SharePoint, Teams, OneDrive, Slack, Visio, Power BI, Technical Documentation, Executive Reporting

PROFESSIONAL EXPERIENCE

AMAZON WEB SERVICES
Seattle, WA (Remote)

Senior Technical Program Manager 04/2020 – 04/2026
Focus Area: ***AWS Service Protection & API Rate Limiting (2024-2026)***

Key Achievements

- Managed technical program execution supporting migration of legacy throttling systems, recovering a program at risk of missing organizational objectives and delivering 8 successful customer migrations against a target of 5 within a 3-month period.
- Coordinated cross functional engineering teams to execute software modernization initiatives, including technical planning, implementation milestones, dependency tracking, and issue resolution supporting aggressive delivery timelines.
- Directed the Operational Readiness Review (ORR) program refresh for AWS Service Protection, strengthening technical governance practices and establishing architecture review controls supporting software adoption and operational consistency.
- Partnered with engineering, architecture, and leadership stakeholders to streamline executive approval workflows, reducing Principal and Distinguished Engineer review timelines from 6 months to 3 weeks.
- Established roadmap accountability, execution tracking, and program governance across technical teams to support modernization objectives and long-range service protection strategy.

Focus Area: ***EC2 Networking & Load Balancing (2020-2024)***

Key Achievements

- Led execution of a multiyear infrastructure modernization program supported by a 10-year strategic roadmap and 72 FTE operating model, coordinating migration planning across 900+ distributed services and multiple engineering organizations.
- Delivered $510M in capital cost avoidance through modernization of cloud networking infrastructure and elimination of proprietary hardware dependencies.
- Developed forecasting methodologies supporting infrastructure growth modeling, customer demand planning, resource allocation, and long-range technical planning across large scale cloud environments.

- Coordinated engineering, analytics, finance, and leadership stakeholders to develop executive forecasting models, technical program reviews, and strategic planning materials supporting enterprise investment decisions.
- Developed scalable planning frameworks supporting schedule management, dependency tracking, risk mitigation, resource planning, and operational readiness across complex technical environments.
- Authored executive planning narratives, technical white papers, operational reviews, and program documentation supporting engineering alignment, investment planning, and executive decision making.
- Orchestrated weekly and monthly business review cadences across EC2 Networking organizations, developing KPI reporting, technical narratives, and executive presentations supporting prioritization of infrastructure initiatives and operational risk management.
- Improved delivery efficiency through implementation of automated migration frameworks and simplified deployment processes, reducing manual engineering effort and accelerating customer adoption.

UNITED STATES MARINE CORPS

CONUS: (MCBH Kaneohe Bay HI, Camp Pendleton CA) | **OCONUS:** (Luanda Angola, Budapest Hungary, Islamabad & Karachi Pakistan)

Communications Systems Chief & Network Systems Architect 06/2006 – 07/2017

Key Achievements

- Led communications and network operations supporting domestic and international organizations, integrating classified and unclassified systems, satellite communications, radio networks, and command and control capabilities supporting mission critical operations.
- Coordinated integration, deployment, testing, and sustainment activities across communications, network, and information systems supporting operational readiness and mission execution.
- Developed and maintained operational procedures, technical documentation, and execution frameworks supporting schedule adherence, risk mitigation, and standardized operations.
- Coordinated cross functional teams responsible for communications systems, logistics, network operations, systems administration, and technical support to maintain operational continuity in high risk and time sensitive environments.
- Partnered with U.S. Government and international stakeholders to communicate technical, operational, and mission requirements across diverse organizations and globally distributed environments.

EDUCATION

MASTER OF SCIENCE: Applied Artificial Intelligence 2026 - Present
University of San Diego, San Diego, CA

MASTER OF SCIENCE: Project and Program Management 2019
University of Limerick, Limerick, Republic of Ireland

BACHELOR OF SCIENCE: Information Systems Management 2018
National University, La Jolla, CA

U.S. SECURITY CLEARANCE HISTORY

U.S. Citizen eligible for U.S. Government Security Clearance(s)

SECRET 2007-2017
TOP SECRET w/ SCI Eligibility 2010-2015
